                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, ottis media, bacteraemia and/or pneumonia. The present sequence represents a s. pneumoniae BVH-11 protein antigen, from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The

                                                                             have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the protein they encode. The protein antigens may then be used as vaccines for t prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents as some protein antigen, from the present invention.
                                                                                                                                                                                                                          Streptococcal antigens useful for vaccinating otitis media, bacteremia and/or pneumonia -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Streptococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAB12758

The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents a s. pneumoniae BVH-11 protein antigen, from the present invention.

        The present sequence represents a protein from Streptococcus pneumoniae. The nucleic acid sequence encoding the Streptococcus pneumoniae protein can be useful in vaccines for inducing protective antibodies against Streptococcus pneumoniae, for treatment or prevention of infection e.g. pneumonia, otitis media or meningitis. Probes based on the nucleic acid are used to detect Streptococcus infection (by usual hybridisation or amplification methods), also for isolating Streptococcus genes or their allelic variants. The protein can be used similarly to detect specific antibodies in standard immunoassays, especially for diagnosing or monitoring infections. Antibodies which bind the protein are used to
                                                                                                                                       Claim
                                                                                                                                                          Nucleic acid encoding antigenic peptide(s) from Streptococcus pneumoniae - or their epitope-containing fragments, useful in protective or therapeutic vaccines, and for diagnosis
                                                                                                                                                                                                                                                                                        31-OCT-1996;

                                                                                                                                                                                                                                                                                                                                                                                              ABQ84792 to ABQ84904 represents nucleic acids which encode the Streptococcus pneumoniae antigens given in ABP54557 to ABP54669. The S. pneumoniae antigens have antibacterial activity and can be used in vaccines. The S. pneumoniae antigens can also be used to prevent or attenuate a Streptococcal infection in an animal. The polynucleotides encoding the S. pneumoniae antigens can be used to detect Streptococcus nucleic acids. ABQ84905 to ABQ85130 represent primers used in the cloning of S. pneumoniae ORFs (open reading fra which are used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New Streptococcus pneumoniae antigens, useful for Streptococcus and for preventing or attenuating di Streptococcus infection -
                                                                                                                                                                                                                                                                                                                                                                          Sequence

(HCPC3). The sequence was deduced from the open reading frame of an isolated gene (see AAX25394). A smaller (20 kDa) HCPC3 protease is encoded by an open reading frame of S. pneumoniae serotype 3, and this open reading frame may be part of a larger open reading frame corresponding to the present sequence from the S. pneumoniae serotype 4 genome. Amino acids 1-58 and 90-132 of the 20 kDa protein have substantial sequence identity with amino acids 170-227 and 258-300 of the 79 kDa protein. Proteins and peptides or polypeptides containing these regions, and DNA sequences encoding them, are claimed. HCPC3 proteases and polypeptides can be used as immune system stimulating compositions (claimed). They can produce an immune response against infection or colonization (claimed). They can produce an ammalian subject against infection or colonization (claimed). They can produce a B cell response, a T cell response, an epithelial cell response, or an endothelial cell response (claimed). The expression of the proteins on the surface of an inhibit Claimed used in xenotransplantation can be used to inhibit Claimed used in firm and rejection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes nucleic acids (I) encoding protein antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, oticis media, bacteraemia and/or pneumonia. The present sequence represents the S. pneumoniae BVH-11C protein antigen.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                  The invention describes an isolated polypeptide (I) with 70-90% identity to Streptococcus pneumonia protein BVH-3, BVH-11, variants BVH-3 or BVH-11, or chimeric sequences derived from them. A vaccine comprising (I) is useful for therapeutic or prophylactic treatment omeningitis, otitis media, bacteraemia or pneumonia infection in an individual susceptible to these disorders. (II) is also useful for therapeutic or prophylactic treatment of any streptococcal bacterial
                                                                                                                                                                                                                                                                           New Streptococcus pneumoniae BVH-3 and BVH-11 variant and epitope-bearing polypeptides, useful as vaccine components for treating or preventing streptococcal infections such as otitis media, meningitis, and bacteraemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Streptococcus Synthetic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Streptococcus such as Streptococcus pyogenes, group B Streptococcus such as Streptococcus agalactiae, S. uberis, S. nocardia or Staphylococcus aureus) in an individual susceptible to the infection. A polynucleotide (III) encoding (I) is useful in DNA immunisation techniques. The Streptococcus polypeptides are useful in a diagnostic test for S. pneumoniae infection. (III) is useful for designing DNA probes for use in detecting the presence of Streptococcus in a biological sample suspected of containing the bacteria. The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcus pneumoniae gene used to obtain antigenic peptides, described in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              301
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    241
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                421
```

The invention describes an isolated polypeptide (I) with 70-90% identity to Streptococcus pneumonia protein BVH-3, BVH-11, variants BVH-3 or BVH-11, or chimeric sequences derived from them. A vaccine comprising (I) is useful for therapeutic or prophylactic treatment omeningitis, otitis media, bacteraemia or pneumonia infection in an individual susceptible to these disorders. (II) is also useful for

t of (II)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         techniques. The Streptococcus polypeptides are useful in a diagnostic test for S. pneumoniae infection. (III) is useful for designing DNA probes for use in detecting the presence of Streptococcus in a biological sample suspected of containing the bacteria. The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcal infections. This sequence represents a chimeric gene created from fragments and variant fragments of Streptococcus pneumoniae genes, described in the method of the invention.

Note: This sequence does not appear in the specification but has been created according to information given in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   infection (e.g., caused by Streptococcus pneumóniae, group A Streptococcus such as Streptococcus pyogenes, group B Streptococcus such as Streptococcus guberis, S. nocardia or streptococcus agalactiae, S. dysgalactiae, S. uberis, S. nocardia or Staphylococcus aureus) in an individual susceptible to the infection. A polynucleotide (III) encoding (I) is useful in DNA immunisation

The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents the S. pneumoniae NEW4 protein antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim

A polynucleotide (III) encoding (I) is useful in DNA immunisation techniques. The Streptococcus polypeptides are useful in a diagnostic test for S. pneumoniae infection. (III) is useful for designing DNA probes for use in detecting the presence of Streptococcus in a biological sample suspected of containing the bacteria. The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcal infections. This sequence represents a truncate

The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcal infections. This sequence represents a truncate of a Streptococcus pneumoniae gene used to obtain antigenic peptides, described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New Streptococcus pneumoniae BVH-3 and BVH-11 variant and epitope-bearing polypeptides, useful as vaccine components for treating or preventing streptococcal infections such as otitis media,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          meningitis, and bacteraemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Note: This sequence does not appear in the specification but has been created according to information given in the invention.

The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the protein they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents the

                                                                                    The invention describes an isolated polypeptide (I) with 70-90% identity to Streptococcus pneumonia protein BVH-3, BMH-11, variants of BVH-3 or BVH-11, or chimeric equences derived from them. A vaccine comprising (I) is useful for therapeutic or prophylactic treatment of meningitis, otitis media, bacteraemia or pneumonia infection in an individual susceptible to these disorders. (II) is also useful for therapeutic or prophylactic treatment of any streptococcal bacterial
                                     Streptococcus such as Streptococcus
                                                                                                                                                                                                                                                                                                                                          Example 1; Page -; 113pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                  New Streptococcus pneumoniae BVH-3 and BVH-11 variant and epitope-bearing polypeptides, useful as vaccine components for or preventing streptococcal infections such as otitis media, meningitis, and bacteraemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2002-122272/16.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            20-JUN-2000; 2000US-212683P

The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcal infections. This sequence represents a truncate of a Streptococcus pneumoniae gene used to obtain antigenic peptides, described in the method of the invention.

Note: This sequence does not appear in the specification but has been created according to information given in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Staphylococcus aureus) in an individual susceptible to the infection. A polymucleotide (III) encoding (I) is useful in DNA immunisation techniques. The Streptococcus polypeptides are useful in a diagnostic test for S. pneumoniae infection. (III) is useful for designing DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence

The Streptococcus polypeptides are useful in a diagnostic test for S. pneumoniae infection. (III) is useful for designing DNA probes for use in detecting the presence of Streptococcus in a biological sample suspected of containing the bacteria. The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcal infections. This sequence represents a chimeric gene created from fragments and variant fragments of Streptococcus pneumoniae genes, described in the method of the invention.

Note: This sequence does not appear in the specification but has been created according to information given in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            BVH-3 of BVH-11, or chimeric sequences derived from them. A vaccine (II) comprising (I) is useful for therapeutic or prophylactic treatment of meningitis, otitis media, bacteraemia or pneumonia infection in an individual susceptible to these disorders. (II) is also useful for therapeutic or prophylactic treatment of any streptococcal bacterial infection (e.g., caused by Streptococcus pneumoniae, group A Streptococcus such as Streptococcus aureus) in an individual susceptible to the infection. A polymacleotide (III) encoding (I) is useful in DNA immunisation for the first continuation of the first contin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                identity to Streptococcus pneumonia BVH-3 or BVH-11, or chimeric sequenc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New Streptococcus pneumoniae BVH-3 and BVH-11 variant and epitope-bearing polypeptides, useful as vaccine components for treating or preventing streptococcal infections such as otitis media,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
Infection (e.g., caused by Streptococcus pneumoniae, group A Streptococcus such as Streptococcus pneumoniae, group A streptococcus such as Streptococcus pogenes, group B Streptococcus agalactiae, S. dysgalactiae, S. uberis, S. nocardia Staphylococcus aureus) in an individual susceptible to the infection. A polynucleotide (III) encoding (I) is useful in DNA immunisation techniques. The Streptococcus polynometriae.
                                                                                       The invention describes an isolated polypeptide (I) with 70-90% identity to Streptococcus pneumonia protein BVH-3, BVH-11, variants of BVH-3 or BVH-11, or chimeric sequences derived from them. A vaccine (I BVH-3 or BVH-11) is useful for therapeutic or prophylactic treatment of meningitis, otitis media, bacteraemia or pneumonia infection in an individual susceptible to these disorders. (II) is also useful for therapeutic or prophylactic treatment of any streptococcan bacterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Streptococcus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            test for S. pneumoniae infection. (III) is useful for designing DNA probes for use in detecting the presence of Streptococcus in a biological sample suspected of containing the bacteria. The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcal infections. This sequence represents a chimeric gene created from fragments and variant fragments of Streptococcus pneumoniae genes, described in the method of the invention. Note: This sequence does not appear in the specification but has been created according to information given in the invention.

The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents the S. pneumoniae BVH-11A protein antigen.

(II) is also useful for therapeutic or prophylactic treatment of infection (e.g., caused by Streptococcus pneumoniae, group A Streptococcus such as Streptococcus prophylactic treatment of any streptococcus such as Streptococcus prophylactic, s. dysgalactiae, group B Streptococcus such as Streptococcus prophylactic, s. dysgalactiae, group B Streptococcus such as Streptococcus prophylactic, s. dysgalactiae, s. uberis, s. nocardia or Streptococcus aureus) in an individual susceptible to the infection. A polynucleotide (III) encoding (I) is useful in DNA immunisation test for S. pneumoniae infection. (III) is useful in a diagnostic test for S. pneumoniae infection. (III) is useful in a biological sample suspected of containing the presence of Streptococcus in a biological sample for detecting circulating s. pneumonia nucleic acid in a biological containing the presence of Streptococcus in a biological selection diagnosing streptococcus infections. This sequence represents a truncate of a Streptococcus pneumoniae gene used to obtain antigenic peptides, or more missed in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 50
                           CC BVH-3 or BVH-11, or chimeric sequences derived from them. A vaccine (II) C comprising (I) is useful for therapeutic or prophylactic treatment of c meningitis, ottitis media, bacteraemia or pneumonia infection in an CC individual susceptible to these disorders. (II) is also useful for therapeutic or prophylactic treatment of any streptococcal bacterial cinfection (e.g., caused by Streptococcus pneumoniae, group A Streptococcus such as Streptococcus supogenes, group B Streptococcus such as Streptococcus pneumoniae, group A Streptococcus such as Streptococcus supogenes, group B Streptococcus such as Streptococcus such as Streptococcus such as Streptococcus such as Individual susceptible to the infection. (I Staphylococcus aureus) in an individual susceptible to the infection. (I Polymucleotide (I II) encoding (I) is useful in DNA immunisation techniques. The Streptococcus polypeptides are useful in a diagnostic test for S. pneumoniae infection. (III) is useful for designing DNA compared to the presence of Streptococcus in a biological sample suspected of containing the bacteria. The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcus and variant fragments of Streptococcus cus in a biological sample created from fragments and variant fragments of Streptococcus cus in a biological containing the bacteria. The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcus and variant fragments of Streptococcus cus of Streptococcus cus in a biological containing the bacteria. The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for claim contains of streptococcus cus cus contains the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    epitope-bearing polypeptides, useful as vaccine components for treating or preventing streptococcal infections such as otitis media, meningitis, and bacteraemia -
Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention describes an isolated polypeptide (I) with 70-90% identity to Streptococcus pneumonia protein BVH-3, BVH-11, vari BVH-3 or BVH-11, or chimeric sequences derived from them.
